Extraordinary Cities

Millennia of Moral Syndromes, World-Systems and City/State Relations

Contents

Part I   Setting down and setting up

Chapter 1 A cities' perspective

Six recent discoveries of cities
> Globalization discovery
> Economics discovery
> Political science discovery
> Institutional discovery
> Green discovery
> Historical discovery

Why the discoveries were necessary
> Geohistory of the development of social science
> State-centric social science practices
> State-istics

A city-centric experiment
> The possibility of indisciplinarity
> Geohistory as a state/city tango

An outline framework of what's to come

Chapter 2 Conceptual toolkits

Social agents: the moral-syndromes toolkit
        Moral Syndromes
        Relations between syndromes

Systematic structures: the world-systems TimeSpace toolkit
        Geohistorical social systems
        Macro-social change
                1. Within-system macro-change
                2. Between-systems macro-change
        TimeSpace structures
                1. Generic TimeSpaces across geohistorical systems
                2. Specific TimeSpaces within geohistorical systems

Geohistorical tango: the city/state toolkit
        States as process
        Cities as process I: externalities from two master economic processes
                1. City externalities: agglomeration effects
                2. City network externalities: connectivity effects
        Cities as process II: two types of urban external relations
        Cities as process III: five great economic forces of expansion

Summing up and joining together

··

PART II Narrative I: beginning conjectures

Chapter 3 City and state beginnings: Western Asia's great creative interlude

Introduction
        Archaeology sans cities
        Towards a post-Childe understanding of early cities
        City-ness as communication potential

The Çatalhöyük story: cities and agriculture as two revolutions or one?
        Mellaart's Çatalhöyük and Jacobs' alternative thesis

Chapter 4 Geographies of Beginning Creative Interludes

▪▪

PART III Narrative II: world-systems

The cities of British hegemony
The cities of American hegemony
Hegemonic transformations of spaces of flows
1. The Dutch trekvaart network
2. The British railway network
3. The US airline network and interstate highway system

Conclusion: Modernity as an (abnormal) historical interlude

■■■

PART IV Narrative III: prospective conjectures - where we are and where are we going?

Chapter 7   Working in an urban world

Introduction: *sans* hindsight

Cities in Globalization I: world city networks
Contemporary city-ness: world city hierarchy, the global city and world city network
Global urban analysis 2010
Spatial organization: home-regions and global-outreach
1. USAL strategies: intensive and extensive globalizations
2. American strategies: regional and inter-regional geographies
3. Asian strategies: a new distinctive China initiative
4. European strategies: mainstream and northern
5. Alternative Commonwealth strategies
Comparing geographies

Cities in Globalization II: mega cities
The new geography of large cities
Worlds of despair, worlds of hope

Two economic globalizations: cities and states in the early twenty first century

Chapter 8 Towards green networks of cities for the twenty first century

Introduction

Twenty first century as crisis century
Endogenous limits to our world-system
Exogenous limits to our system

Return to the local I: Transition Towns
Local: ideal scale or systems
A limiting vision: where are the cities?

Return to the local II: Green Cities
How green are our cities: a US case study
Green cities: what can they do?
Green cities in context

Green networks of cities: modern and beyond modern
Towards a modern green network of cities: modularity
Towards a green network of cities beyond modernity: alternative import replacements

Concluding with the last tango: what new *modus* for guardian/commercial relations?
